Event Planning in India is Broken

Every year, millions of Indians plan events — with no intelligent tool to guide them.

Cost Opacity

No reliable way to know what a wedding, birthday, or corporate event should cost in your city. Vendors overcharge because consumers don't know fair prices.

Fragmented Planning

Juggling WhatsApp, spreadsheets, Google Search, and phone calls — all for one event. No single tool brings it together.

Not Made for India

Existing AI tools output USD prices for Western markets. Indian cities, event types, and vendor categories are entirely different.

OUR SOLUTION

Introducing EventIQ

A full-stack AI event planning platform, built specifically for India.

Groq AI (LLaMA 3)

10+ Indian Cities

MongoDB Atlas

JWT Auth

PDF Export

Budget Editor

How It's Built

Frontend

HTML5 / CSS3
Vanilla JavaScript (ES6+)
Responsive Design
jsPDF Library

Backend

Node.js Runtime
Express.js Framework
REST API Design
JWT Middleware

Database

MongoDB Atlas
Direct Connection String
Users Collection
Plans Collection

AI Layer

Groq API
LLaMA 3 70B Model
City-Aware Prompting
Conversation History

FEATURE 01

AI Chat Interface

Powered by Groq's ultra-fast LLaMA 3 70B model, the chatbot understands your event in plain English and returns an itemised plan in seconds.

- City-aware ₹ cost breakdowns
- Conversation history (follow-ups work)
- Export PDF · Save Plan · Clear Chat
- Supports all 6 event categories

6 Event Categories

Each category uses tailored AI prompts — so the plan always fits the event.

Weddings

Birthday Parties

Corporate Events

College & Cultural

Baby & Bridal Showers

House Parties

My Saved Plans

Every AI-generated plan can be saved to your account and retrieved any time — across devices and sessions.

- Card-based My Plans dashboard
- Plan title + date + preview shown
- Delete plan with one click
- Highlighted active card (blue border)

FEATURE 04

City-Specific Planning & PDF Export

Cities Supported

Mumbai

Delhi

Bangalore

Hyderabad

Chennai

Kolkata

Pune

Ahmedabad

Jaipur

Lucknow

PDF Export

Any saved plan can be downloaded as a formatted PDF — share with family, vendors, or colleagues instantly.

Secure User Authentication

Sign up, log in, and all your plans stay private — protected by industry-standard JWT tokens and bcrypt password hashing.

- JWT tokens (24hr expiry)
- bcrypt password hashing
- Protected API routes
- Secure .env key storage

How the System Works

- 1 User submits event prompt in browser
- 2 Frontend sends request to Express backend (with JWT)
- 3 Backend proxies prompt to Groq API (API key never exposed)
- 4 Groq returns plan → backend saves to MongoDB if requested
- 5 Frontend displays plan; user can save, edit or export PDF

The MongoDB Mobile Network Fix

✗ PROBLEM

Standard MongoDB Atlas connection strings use `mongodb+srv://` format — which requires DNS SRV lookups.

Jio and Airtel mobile networks block SRV record resolution, causing total connection failures for users on mobile hotspots.

✓ SOLUTION

Switched to a direct `mongodb://` connection string with explicit shard hostnames and ports.

This bypasses SRV DNS entirely — establishing a direct TCP connection. Works reliably on Jio, Airtel, and any mobile network in India.

What's Coming Next

Phase 1 · Now

- Streaming AI responses (SSE)
- Persistent conversation history
- Improved server-side PDF (Puppeteer)

Phase 2 · 6mo

- React Native mobile app
- Live vendor API (WedMeGood / Sulekha)
- WhatsApp plan sharing

Phase 3 · 18mo+

- Vendor marketplace & booking
- Multi-language (Hindi, Tamil, Telugu)
- AI voice interface

Thank You

EventIQ — Plan smarter. Budget better. Celebrate more.
